THE ARTIST

Ryan Staub is a glass artist who has blown glass in 11 different countries and territories, working with all kinds of glass and glass equipment. He currently owns and operates his own studio in his hometown of Seattle, Washington. His work can be found in many collections worldwide as well as online at: www.ryanstaub.com

skutt.com

WHY RYAN LIKES THIS KILN

- Best one on the market.
- Gathering port is just right, not so small it's hard to gather out of, not so big it dumps all the heat when you gather.
- Great for a small home or garage studio.
- Good addition to a full sized glass-blowing studio as an affordable color pot.
- Easy to ramp down slowly, minimizing risk to your crucible.
- Small and easy to store when not in use.
- Easily programmable controller with indefinite hold.
- Easy to install.
- Low energy use, high efficiency. (Average cost is \$15/day)

Letter from the Editor

The Definition of a Glass Artist

The pages of the September/October 2015 issue of *Glass Art* are filled with talented individuals who define what it means to be a glass artist. Studio glass pioneer Paul Marioni has been pushing the limits of his medium for nearly five decades, redefining what is possible not only in process but content. At 73, he remains passionate about the “road show,” a grassroots effort started by artists like himself who wanted to spread knowledge and enthusiasm about glass to anyone who showed an interest.

In philanthropic pursuit, flameworker Andrea Spencer works as an artist in residence in Ireland for Arts Care at Belfast City Hospital in an acute care setting. There she uses glass art to “bring more humanity into an environment that can be clinical and daunting.”

As the investigation of renewable resources continues for hot glass studios everywhere, artist/educator Angus Powers built his first Roman or primitive daub furnace. This fully functional wood furnace with multiple pots of colored glass is capable of reaching contemporary temperatures and provides Powers with the opportunity to educate artists and students.

Photographic sculptor Mary Van Cline’s inventive process often combines hot and cold glass techniques, cast elements, and photosensitized glass in one piece. Recently, the artist joined forces with DuPont to develop a method for infusing photographic images into safety glass expanding possibilities for outdoor and architectural applications.

Inventive, ingenious, sharing. These qualities define glass artists around the globe.

Each year in the September/October issue, *Glass Art* includes a Directory of Industry Supplies to help artists find the companies that provide the materials they need to create their art. In a world where the Internet seems to be king, you might see this printed directory as obsolete. The overwhelming listings found on the Internet, however, often provide little or no information about the company you are researching. It’s good to have a reliable listing of suppliers who have a proven track record of longevity in business and a solid reputation within the glass community right at your fingertips all year long—something you will find in every Directory of Industry Supplies from *Glass Art*.

Retailers across the country are reporting a resurging interest in stained glass. Why not capitalize on that and start a “Come Back to Glass” campaign in your studio or store to show them what our industry has to offer. We’ll be doing the same with our Glass Expert Webinars™ during the week of September 15–17. In addition to the two stained glass sessions from Denny Berkery and Cathy Claycomb, we’ll be offering more advanced fusing, cold working, and business Webinars and Lectures. Visit www.glassartmagazine.com and click on the Glass Expert Webinar™ link under “What’s New” for complete details on these and many more upcoming Webinars.

Promoting glass artists from cover to cover—in print and online,

Shawn Waggoner

Paul Marioni, artist and one of the founders of the Studio Glass movement, earned a degree in philosophy but fell in love with light. It's not uncommon to read comparisons between Albert Einstein and Marioni, many based on their trademark shock of silver hair. But more meaningful and profound is their shared lifelong fascination with light. Einstein once said, "For the rest of my life I will reflect on what light is."

Known as an innovator in the glass world, Marioni has been pushing the limits of his medium for nearly five decades, redefining what is possible not only in process but content. "I work with glass for its distinct ability to capture and manipulate light. While my techniques are often inventive, they are only in service of the image." Marioni's work can be found in collections including the Smithsonian American Art Museum, Washington, D.C.; The Corning Museum of Glass, Corning, New York; and the Museum of Arts and Design, New York, New York.

Marioni, who graduated in 1967 from the University of Cincinnati, Ohio, is a Fellow of the American Crafts Council and Glass Art Society Lifetime Achievement Award recipient. He has received three fellowships from the National Endowment of the Arts and has taught at schools worldwide including the Penland School of Crafts, Bakersville, North Carolina; Pilchuck Glass School, Stanwood, Washington; and recently at the Glass Furnace, Istanbul, Turkey.

At 73, Marioni remains passionate about the "road show," a grassroots effort started by artists like himself—Fritz Dreisbach, Dale Chihuly, and Richard Marquis—to spread knowledge and enthusiasm about glass to anyone who showed an interest. "I've worked in glass all but three years of my life. What was I thinking to get into a field with no history, no books, no teaching? Obviously I wasn't thinking. But we built the Studio Glass movement on cooperation, not competition, because there was no past. There was nothing for us to get. And we've barely scratched the surface of what can be done."

A surrealist whose work has always addressed issues of nature, identity, and emotion, Marioni continues to infuse his art with intensity, using dreams as well as political and social convictions to make statements that cause us to forget the unfair advantage that working with glass affords. Though his material is inherently beautiful, the philosophy behind Marioni's work is "to make people think rather than tell them *what* to think." In addition to his vast gallery work, Marioni has produced over 100 public and private commissions in both cast glass and terrazzo.

Life at Wallingford

Marioni's kitchen chalkboard reads: Nietzsche: "We have art in order not to die of the truth." Kafka: "There is infinite hope, but not for us."

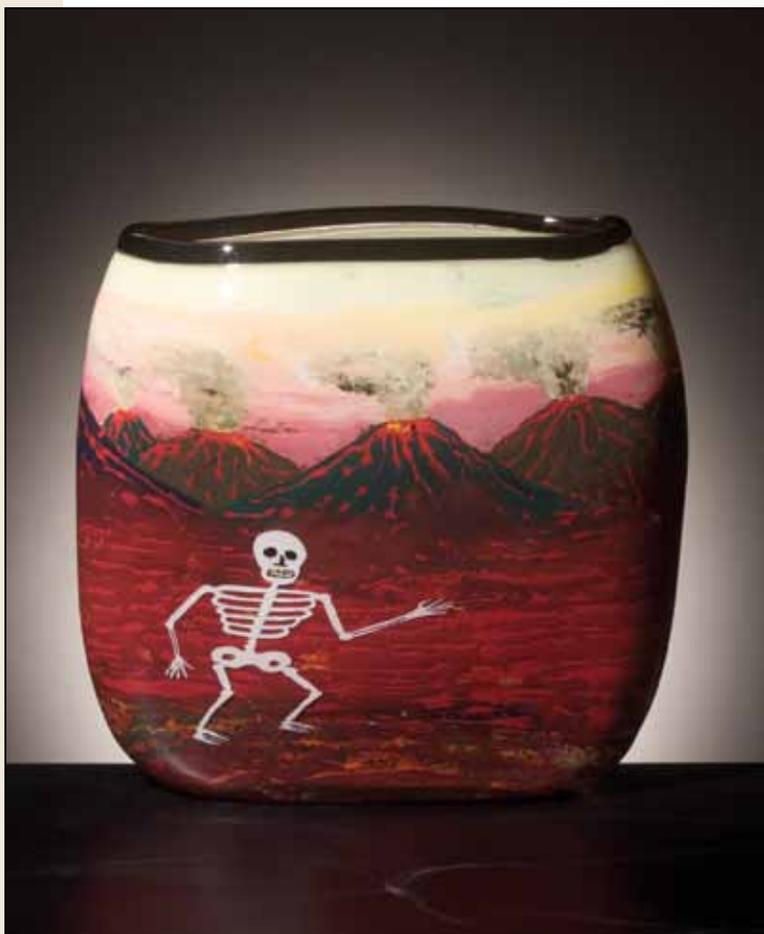

Marioni came to Seattle, Washington, for a short stay in 1978 and never left the old telephone switching station in Wallingford that became both home and studio. He planned to stay for 11 weeks to finish a project he was awarded by the Seattle Arts Commission. But the work kept coming. "One of the reasons I stayed here is they care about regional art in Seattle. Every artist I know here sells art. They really don't care about what's going on in New York, which to me is new depths of shallow. One thing that bothers me most is elitism in art."

Wonderfully crammed with priceless art, one long room serves as living area, kitchen, and bedroom, all drenched in diffused natural light streaming in through tall windows. Hanging from one wall are dozens of pocket-size glass skulls, little surprises Marioni likes to hand out as free pieces of art. They are in the good company of a multitude of fans, masks, paintings, photographs and, of course, glass.

At one time Marioni's collection contained 1,000 objects, half of which were glass, including a stunning grouping of son Dante's goblets. "I've never been a really big seller. I trade works with a lot of artists. I try not to judge art. Anything with a strong expression I try to acquire." In 2012, 520 objects were donated to the Tacoma Art Museum, and over 100 patterns and drawings have gone to The Corning Museum of Glass library.

Marioni, who enjoys living on the edge, wears his five near-death experiences like a badge. The macabre list includes a car crash, drowning, plane crash, broken neck, and pneumonia, when he was induced into a medical coma in order to save his life. His children brought him back, enabling him to paint his "other side" hallucinations on glass.

Currently working from the studio space at Wallingford are Marioni's daughter Marina, a successful jewelry maker, and son Dante, whose work in glass is well known and collected internationally. Paul now spends part of the year at Wallingford and part at his studio in Guanajuato, Mexico, where he has a small studio for drawing and painting.

Paul Marioni, *Ooohaha*, 9" x 9" x 5",
painted and blown glass, 2005.

Rebel with a Cause

Talking to Marioni about his young life in high school and college conjured visions of Holden Caulfield and his passionate hatred of phonies and the false trappings of life, the kind of angst that made J.D. Salinger's *Catcher in the Rye* a personal manifesto for millions. The son of a physician and aspiring opera singer, Marioni was always an excellent student, receiving As in every math class he ever took. But he questioned everything, a trait that he says one out of five teachers loved. "The other four had the 'how dare you question me' attitude, which never really worked for me." In his spare time, he built hot rods and motorcycles and caused a lot of trouble for adults. "At age 12, I started thinking, 'The adults are lying. Something is wrong with this picture.' Hypocrisy is a terrible thing to show children."

As a young boy, Marioni attended Catholic school and dreamed of being a saint. Though he was only 5 at the time, he remembers when the United States dropped the atomic bomb on Hiroshima and Nagasaki, and a pacifist was born. An early hero of his was Bertrand Russell, British philosopher who wanted to ban the bomb.

Marioni studied engineering at the University of Dayton, Ohio, and loved poetry and literature, but he left the school due to a conflict with mandatory ROTC requirements. "I'm a pacifist. I won't fight a war. Why should I study war?" He enrolled at the University of Cincinnati and eventually transferred to San Francisco State University to pursue his dream of being a poet. "I drove to San Francisco to see Lawrence Ferlinghetti and Allen Ginsberg and hang out in North Beach and City Lights. It was truly fantastic—people reading poetry on street corners. What's this world come to? And why aren't we still doing it, or why don't we go back to it instead of all the nonsense going on today?"

Marioni also began studying philosophy with an interest in existentialism and absurdism. "To be in a field where you could discuss ideas and challenge other people's thinking was totally liberating." He returned once more to the University of Cincinnati to study philosophy with Van Meter Ames. Influenced by the teachings of Ludwig Wittgenstein, Marioni began to believe that words were meaningless and decided not to become a writer.

Between his studies at Cincinnati and San Francisco, Marioni married and had two children. In the late 1960s he supported his family by rebuilding total automobile wrecks and hot rods, all skills he taught himself. Eventually he owned 275 cars and 12 motorcycles. "I still like going fast. Speed is complete freedom from the world of intellect."

His children were 6 and 3 years old when Marioni became a single father. "I hadn't been raised to be a dad, let alone a mom, but I sat them down and told them it's kind of like being in a lifeboat. If we are going to survive and make it through life, we're going to have to cooperate, help each other."

Dante and Marina joke today that their father was lucky to have liberal kids. In spite of the fact that there were no bed times or limits on who their friends could be, Marina survived hitchhiking out to Muir Beach to ride her horse, and Dante lived to tell about riding his bike to Sausalito at age 9 to take the ferry to Chinatown, where he'd buy fireworks and hang out there with other kids.

Successful Filmmaker Discovers Glass

Many do not know that Marioni was a successful filmmaker prior to his career in glass. His fascination with light inspired both. "I always loved movies, and film can capture illusion *and* reality. In philosophy, absurdism is trying to measure the distance between illusion and reality, which my whole life has been."

A chance meeting with the wife of Robert Nelson at a grocery store resulted in Marioni working with one of his filmmaking heroes. He began auditing Nelson's classes at San Francisco Art Institute and starred in Nelson's 1970 film *R.I.P.*, an acronym for *Rest in Pieces*. In his performance, Marioni plays a body man who tears a car in half.

One day at Nelson's house, Marioni saw a broken stained glass window. The round panel featured a big teaspoon and was titled *John's Big Spoon*. "It's funny. I went to Europe on my own when I was 20, had gone to Chartres Cathedral, looked at the rose window, and didn't care. Watched glassblowers on Murano and Venice—didn't care. I had no interest in glass until I saw this window and heard the story behind it." An artist named Judy Raffael made the window for a client named John, who had accidentally given his wife an overdose of heroin. The wife survived, and Raffael made the window to remind John never to repeat his actions.

At a renaissance fair, a woman approached Marioni to tell him how much she enjoyed *R.I.P.* The woman was Raffael, and she and

Paul Marioni, *The Premonition*, 24" x 26", leaded glass, 1981.

Marioni became fast friends. He visited her San Geronimo studio where Raffael showed him the fundamentals of selecting, cutting, and leading stained glass. "I met Judy, and as soon as I started working in glass I got sucked right in. She infected me with her enthusiasm. I just saw unlimited possibilities."

At that time in 1972, Marioni had made his own film titled *Hole* but had not shown it. Shot in 16-millimeter, the 20-minute pseudo documentary tells the story of a man obsessed with holes. Once released, *Hole* went on to win several prestigious film awards and was screened all over the United States for about two years at film festivals and at the Whitney Museum of American Art, New York, and the Berkeley Art Museum, California. "I put *Hole* on the shelf when I got interested in glass." Marioni had found a new material for capturing light and illusion, and for experimenting with refraction, reflection, and expression.

It Only Takes One

Not many artists experience overnight success, but Marioni is one of the lucky few. His first exhibition was held at the John Bolles Gallery in San Francisco in 1971. Of 13 galleries, only Bolles would even look at his portfolio, but one is all it takes. "When he looked at my work, he said, 'Oh, this is fantastic. I never dreamt anything could be done with glass.' My gallery work was surreal figures, totally nontraditional. I was making three-dimensional wall pieces and working totally uninhibited. I had no preconceived notions about what I should do."

Paul Marioni, *Ghost*, 32" x 12" x 7",
blown glass, enamels, 2001.

Paul Marioni, *Spirits Lifting*, 9" x 9" x 5",
painted and blown glass, 2005

Cecile McCann, editor of *Artweek*, saw Marioni's exhibition and wrote a review, putting the young artist on the map. That same week, Pablo Picasso had a retrospective at the Museum of Modern Art in San Francisco, to which *Artweek* dedicated a half page. Marioni was featured on two full pages that included seven photographs of his work. "She was astounded that I had done something she'd never seen or dreamt or thought of. It just kind of startled everybody, because it was so nontraditional. You couldn't, and I didn't, call it stained glass. Bob Nelson and Judy Raffael were single-handedly influential in my becoming an artist, and Cecile put me on the map."

His show at John Bolles Gallery represented the birth of Marioni's career. He was suddenly in demand, not only to exhibit but to teach. He met lifelong friends and comrades in the Studio Glass movement such as Marvin Lipofsky, Chihuly, Dreisbach, and Marquis. "I had no idea there was anybody else working in glass, no idea there was a Studio Glass movement prior to this time." And it ultimately opened the door for his long and fruitful relationship as a teacher and artist in residence at Pilchuck Glass School.

Marioni's Gallery Work

Marioni creates sculpture and vessels that incorporate humor, figures, tribal masks, photographs, visual puns, and political commentary. Early work was based on dreams and dream study. International travel inspires and informs much of his later work. "I have the luxury of not being market driven. I make gallery work for myself as a look into my inner soul and an expression of my human nature. It's for me. If somebody else also relates to it, fine."

Represented by the William Traver Gallery in Seattle, Marioni fans keep coming to his exhibitions because every show is different. "You don't have to make the same work, but I will tell you, if you change you won't sell. When I became an artist, there was very little chance of financial riches. I started in a field that was not promising — film — and moved right into a field that was completely unknown. Working in the studio is singly it. Everything else is just work. Once you put your vision into reality, that's the reward."

Having been actively engaged in both the civil rights movement and protesting the Vietnam War, Marioni has no fear of taking on controversial subjects. His piece *November 22, 1963*, depicting an American flag with black stripes and a pirate's skull, symbolizes his interpretation of the meaning of John F. Kennedy's assassination. "It was the day the bad guys took over." Rejected from 11 shows for its emotional message, the piece was eventually purchased by Hessisches Landmuseum in Darmstadt, Germany.

Marioni's *Premonition* was triggered by President Ronald Reagan's comment that the United States was capable of winning a nuclear war. "It's about that creepy feeling you get upon hearing those words. There are no winners in war except the ammunition industry and those that rebuild the damage." In this work, Marioni creates emotional impact figuratively through the eyes peering out of the dark. Images of doom such as erupting volcanoes, snakes crawling out of the ground, and a sky filled with black smoke covering the sun support the figure.

More recently Marioni has been exploring kinetic sculpture in glass inspired by the work of figurative painter Francis Bacon. Bacon could paint a human figure so that the viewer was unsure if it was right side up or upside down. "I thought, how far can you reduce the human figure and still make it immediately recognizable." Marioni's *Whistling Vases* break with glass tradition in that they move and encourage viewers to touch them. "This just freaked people out completely. They rock crazily, wobble, wiggle their butts, spin around, and kiss you. I thought they were a complete success. Others thought they were too weird. They're not too weird; they are too funny."

Marioni's *Ghosts* are larger pieces mounted on glass rods that move with the slightest breeze. Shroudlike forms, this work is all about the void, the missing figure. He made his only sale of a *Ghost* to Elton John. "Almost everything I've sold in my whole career has gone to art collectors—people who buy art, not glass collectors. And I feel good about that."

Paul Marioni, Whistling Vase,
14" x 6" x 7", blown glass, 2001.

The Mystery of Studio Glass

Einstein said: "The most beautiful thing we can experience is the mysterious. It is the source of all true art and all sciences." While pioneers like Marioni shed light on techniques needed to express things in glass, the mystery lives on through the beauty of the work itself and the bond between those who came together to create the Studio Glass movement. After 5,000 years of secrecy the road show succeeded, and artists will now forever work in glass.

"It's been exciting—made us a really tight family. We all love each other, and it all came out of cooperation, not competition. We got museum shows; we got educational programs; we got galleries; we got collectors; we got books. We made it all happen by cooperating and working together. I feel so thankful to have been part of a movement that grew roots and is here from now on." **GA**

Andrea Spencer

Humanizing Health Care through the Arts

by Colleen Bryan

The importance of an individual person's inner resources in healing has long been recognized throughout the medical profession. Tapping into those resources is a critical part of the healing arts. In Northern Ireland, an arts and health organization called Arts Care works in partnership with the Health and Social Care Trusts throughout the country to fund artist residencies at public health clinics and hospitals.

Flameworker Andrea Spencer has worked as an artist in residence for Arts Care for nearly 14 years. She has been posted at Belfast City Hospital, an acute care setting, and works at the hospital two or three days each week.

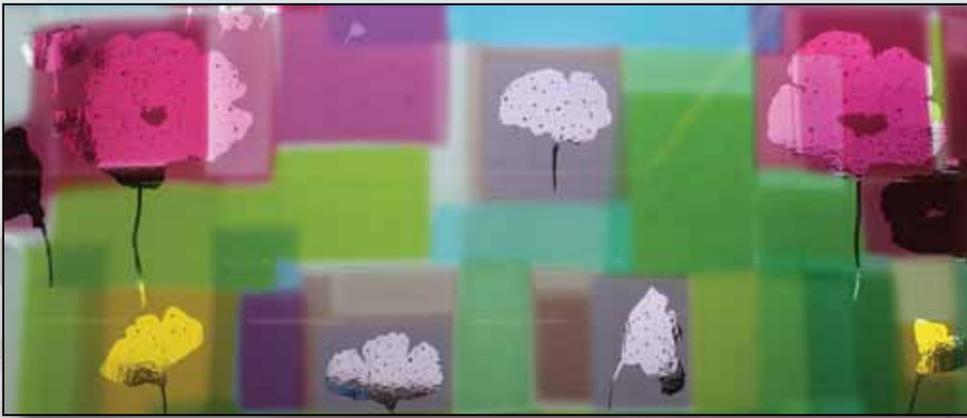

"Ours is a social model, not a clinical one. We are not doing art therapy. Rather, we try to bring more humanity into an environment that can be clinical and daunting, further traumatizing to people who may already be traumatized."

Spencer notes that working with staff and patients together changes the relationships between the two. "It brings both back to the level of individuals rather than promoting the hierarchy that is built into hospital protocols. A worker walks by the poem that a patient has written about staff in the hospital, and the experience changes her perspective on the value of her own role. When they see each other as persons first, it is easier for them to partner in the art of healing."

The program maintains a number of artists in residence. "The artist working inside the health care environment engages patients, staff, and visitors with the arts as they move through their day. Exactly what the artist does depends upon the personality of the artist and the hospital."

Andrea Spencer, *Magnolias detail* (top), 2008; *Fuchsia* (bottom), 40 cm diameter, 2013; and *Meadowflowers detail* (facing page).
Magnolia Photo by Rory Moore. Other photos by the artist.

Defining One's Own Role

There are so many roles that an artist can fill in the hospital. Spencer carves up her post into four separate strands:

- **Conducting participatory workshops on the wards.** “Now I am doing a workshop in the cancer center every Thursday morning. I set up a table in the elevator lobby area and trek around to the nursing stations and remind them to encourage patients to come down. Patients come and we work toward a project that will go back to the ward, where it can be easily accessed by a broad spectrum of people. Patients may not see themselves as necessarily creative or artistic, but they wander down for something interesting to do, something to help get their minds off of their illnesses, or to help them work through their illnesses.”
- **Establishing a gallery space in the hospital with exhibitions that turn over every six weeks.** “In the beginning, we had a lot of shows with work created with the patients, but the landscape has changed so that we don’t do that as often anymore. Mostly we exhibit work by people in the local community. Every year I put a call out and curate exhibitions encouraging all disciplines such as textiles, print, photography, or painting.”
- **Creating temporary installations to change the hospital environment itself.** “Changing the environment is most helpful to hospital workers and extended-stay patients. It catches people’s awareness and is regenerative.” Health and safety plus infection control are always essential concerns with installations in a hospital setting, but Spencer finds that she has greater leeway with temporary installations in nonclinical areas that are only around for a few days or weeks.
- **Organizing an annual arts festival and other periodic events to raise awareness and funds for the program.** “My current chairman is a consulting hematologist but also a classical guitarist. We developed a side of our art program to draw in volunteers and staff members who also play music. Annual arts festivals, which started as two days and have grown to a five-day event, are staged as fundraisers. We try to be comprehensive of the spectrum of arts and so far have included music, visual arts, poetry, and drama. Teaming up with our chairman smoothed the course for bringing this diverse range of activities and events into the environment. In trying to develop this creative culture within the hospital community, we encourage staff to bring these other creative sides of their personalities into the work environment. They enjoy being able to show themselves in a different light to their work colleagues and patients.”

Discovering Unknown Aspects of Self

Beyond restoring equanimity and health, Spencer says, introducing art at a point when people are vulnerable and open can help them discover unplumbed richness in their interior lives. She recently had someone come back to her after a four-year absence.

“I met him in the psychiatric unit ten years ago. He was a chemist who had been working until two weeks before his admission. He returned to tell me a story. When he first met me in the hospital, he couldn’t see that I could do anything to help him and suspected that I was part of a larger conspiracy.”

After a while, the patient decided to give it a go. Slowly, through many conversations and much encouragement, he began to feel that he could make something. Upon release from the hospital, he started art classes. “He came back to tell me that his health is good. He has retired from work and spends his time painting. He visits his housebound elderly uncle and is teaching him to paint. Discovering art in the hospital changed his relationships with his family and uncovered a side of him that neither they nor he had known existed.” Being part of such a narrative, even infrequently, attests to the power that art can have in lives.

Art Appropriate for a Hospital

Spencer cautions that art displays must be appropriate for a health care setting, whatever form or medium is used. Evaluating appropriateness encompasses materials, health and safety concerns, presentation, content, and context.

“I don’t feel that health care settings are the place where people should be challenged by art. People don’t choose to be there. They are often struggling with daunting physical and emotional challenges. Even the relatives of patients coming in to visit are vulnerable. You have to be careful about what you add to the environment to avoid adding to their upset.” When it comes to the gallery offerings at the hospital, the artist selects pieces that are inspired by nature and accessible to a very broad audience. The same considerations go into her design of art projects.

Context matters, too, Spencer says. “Art Care is a charitable organization, and we raise about half the funds for what we do. We made ribbon roses displayed alongside inspirational messages to raise funds for art materials. I set up a table in the foyer, and people really wanted to buy them. But when I went into the waiting room of the cancer center, it seemed quite inappropriate to do the same thing. People there are just so much more vulnerable and captive than when passing through the foyer. That kind of awareness needs to be always at the forefront. You have to stay keenly aware of your environment as it shifts from place to place or moment to moment and always be aware of the effect the art you present is likely to have on the people using the hospital.”

Choosing Projects

Spencer says she organized quite a few glass projects in her hospital post a few years ago and remembers one fellow who was particularly helped to understand the use of color in his paintings from the work he did with glass. She does fewer glass projects now, although in one eight-week project last year, participants made glass sculptures that are now on display in the hospital. For one thing, she came to a clearer understanding of what is required to safely take glassworking into a hospital. Part of the change relates to space. “I had a derelict room on-site in the hospital at the time, but I got moved out since the building was demolished.”

Changes in her own life circumstances and perspective, however, were the main reasons Spencer did not look to reassert glass projects so centrally in the hospital. “I moved out of Belfast and set up my own studio. And I began to create a division between my personal practice and the hospital. I realized that glass is something that I feel passionately about, and I struggle to be present with people who are using it at a very rudimentary level. It is easier for me to do something with them in clay or paper or something I don’t feel so precious towards.”

When Art Is Not about the Artist's Expression

Spencer would like to investigate opportunities to further explore her glass artistry in the hospital rather than focusing so exclusively on engaging others in the artistic process. The artist's post allows for both.

One of the things holding Spencer back, she knows, is awareness that she walks a thin line at the hospital between personal exploration and unanticipated effects on others. "It is easy to be stimulated as an artist by all of the equipment and materials and processes." Radiotherapy masks, for example, take plaster impressions of a face from which masks are made of clear plastic or mesh. Clinicians mark the mask exactly at the spot where radiotherapy will be pinpointed. After use, they are destroyed. "As an artist you see masks as something representative of the person, something that can be painted and decorated and turned into something cheerful or powerful. The mold making process is one you know, so it is very easy to be carried away with your excitement. I mentioned the idea to the medical staff, and they were aghast. They came up with all manner of reasons why an art project with radiotherapy masks was not a good idea. You realize that the people they are making these masks for are moving into a period of great uncertainty about the outcome of their lives." So using these very personally identified masks as material for artwork can be emotionally treacherous.

Spencer has learned that while it can be stimulating for an artist to be where people live so close to the raw edge of their own humanity, where symbols and vehicles of life and death are constantly in play, it is essential to remember what is at the root of her work at the hospital. "The people who stay with an Art Care residency for a while always remember that the art is a vehicle to healing. What they do in the hospital is not about them but about how they can facilitate something for the patients, the hospital workers, and the visitors. In a manner of speaking, you have to park your self-expression at the door—to separate your artistry from the process in order to manage that part well."

GLASS ART SOCIETY

BECOME A MEMBER

The Glass Art Society is an international non-profit organization whose purpose is to encourage excellence, advance education, promote awareness, and support the worldwide community of artists who work with glass. Members enjoy a variety of benefits, including four issues of *GASnews*, access to the Member Directory, free classified listings, discounts, and much more.

Andrea Spencer, *Ribbon Roses detail*, 2011. Photo by the artist.

Spencer's "other life" in glassmaking has indirect benefit for her artist's post at the hospital. "When I leave for extended periods in the summer to take a glass class or travel and see things, I bring different ways of thinking and fresh ideas back to the hospital."

Spencer compresses her work at the hospital into a few consecutive days each week, then returns to her home and studio to concentrate on her own glass artwork. The artist in residence program brings important predictable income and lends stabilizing structure to Spencer's life, but the solitary artist keeps coming back for a feature that is at least as valuable. "I meet some incredible people there. It keeps me in touch with what is really happening in life. Some of their stories are horrific, but they often meet these critical and transformative moments in their lives with real grace and courage. It keeps me connected to the human spirit." **GA**

ANGUS POWERS

RESURRECTING THE ROMAN FURNACE

by Shawn Waggoner

In most modern hot shops, one large furnace heats the molten glass, and many smaller furnaces are utilized for reheating and manipulating the material, a system that allows multiple glassworkers to produce simultaneously. The inefficiency of this process inspired Angus Powers to investigate primitive Roman furnaces that run on a single fire and use the waste heat to accomplish all of the other shaping. "It is worth considering this technique in the green future of contemporary methods of glassworking. Reaffirming the simplest and cheapest ways of performing some tasks helped shine a light on the inefficiencies that have resulted from constant innovation becoming standard practice."

Powers has been building updraft wood-fired primitive furnaces since his masters studies at Tyler School of Art at Temple University, Elkins Park, Pennsylvania. He took a graduate class with Dr. Philip Betancourt focusing on ancient techniques, which inspired him to investigate and create core formed glass vessels that actually predate the process of blowing glass. Another Tyler glass faculty member, Dan Cutrone, aided Powers in the process of both research and the creation of a small primitive glass furnace from scratch. With his first primitive furnace, Powers was able to create a series of small core-formed glass vessels and involve the Tyler glass community in his experiment. After a successful demonstration for the class, Powers began to host various workshops for Jon Clark's undergraduates at Tyler School of Art throughout his graduate studies. "It was at that point I realized the huge potential for the experience to be used as a teaching tool to share and gain historical perspective in the field."

For Powers, head of glass and chair of sculpture at the New York State College of Ceramics at Alfred University, Alfred, New York, the most important function of this research and the furnace itself is education. It offers students a hands-on historical lesson on the technology and working conditions of ancient glassblowers while providing a deeper appreciation for the convenience of a modern hot glass facility. "My students are completely spoiled by the hot shop at Alfred University and basically have access to hot glass at all times during the academic year. Working with Roman furnaces requires days of splitting wood, gathering and fabricating tools and furniture, and stoking the fire. Each of these tasks delivers a lesson."

Angus Powers working at the furnace, 2013. Photo by Dan Volk.

In 2012, Powers built his first Roman or primitive daub furnace using nearly 3,000 pounds of local stone, sand, alfalfa, clay, and grog. This fully functional wood furnace with multiple pots of colored glass was capable of reaching contemporary temperatures. After three firings, he decided to host an open house and a workshop so his students could work at the furnace. "At this point, the furnace was running very well. Its super structure has held up tremendously, even with the heavy precipitation of Hurricane Sandy and the repeated freezing and thawing of the winter season."

First Open House and Workshop

Powers, Daniel Volk, and guest artist Phil Vinson worked together to unveil and demonstrate the Roman furnace to Alfred glass students. The October 2012 open house was coordinated with the Alfred sculpture event, *Meltdown*, as a way to integrate Powers' furnace into the existing programming and take advantage of the local community interest in the fire arts as well as the various visitors from other schools who were in town for the iron pour. "The open house and workshops were really valuable to me, because they let the local community have an experience unlike anything nationally available. The event provided glass artists from Alfred University with an opportunity to get to the root of their craft. I think creating objects in this rare type of furnace empowers artists and puts the objects into a unique context, one impossible to achieve through modern practices."

Approximately 100 people came throughout the program of demonstrations and exhibition of work produced from the furnace, followed by a workshop where visiting artists plus graduate and undergraduate students created pieces from the furnace. Blogged Vinson: “The little wood-fired shop is amazing. It is one of those things that all glassblowers want to experience but few actually ever build. Angus is a bit of a pioneer in this field. This is not the first Roman furnace that he has built, and he is getting pretty good at it. The furnace was stoked by his friend and fellow pyro, Dan Volk. Everything needed to make glass was right there in the lean-to except the annealer. That was about 30 yards up the hill in the studio, which means after you are finished forming the glass, there is one last flash heat. The piece is held up for the spectator’s approval. Then as the applause fades out in the distance, you jog up the hill through the autumn mist, hot finished glass on the end of the stick. There wasn’t a single casualty from the Olympic-style marathon to the annealer.”

Vinson continues: “I had a blast. There was a mini bench in front of the furnace close to the ground, so the flames coming from the opening of the furnace did not remove facial hair. It just so happens that I have a shorty blowpipe, which turned out to be the perfect size. It got lots of use that day. One by one, I would bring the molds out, make a piece, do the triathlon up the hill, have a sip of cider, then go to the truck and walk another one down and quietly place it behind the bench. There were lots of folks there, and we all took turns making stuff. It was an experience like no other as far as blowing goes—totally different than gas- or electric-fired equipment. It really felt like I was getting to the roots of my craft.”

Clark Workshop Leads to Collaborative Work

On November 13, 2012, Powers invited artist and educator Clark to attend a private event making work in his Roman furnace. In the early 1970s, Clark established a new program for glass at Tyler School of Art. He now holds the position of Professor Emeritus from Temple University. Clark received his master of arts degree from the Royal College of Art in London and his bachelor of science from the University of Wisconsin at River Falls. His students have gone on to teach and head glass programs at Tulane University, New Orleans, Louisiana; Virginia Commonwealth University, Richmond, Virginia; the University of Louisville, Louisville, Kentucky; Alfred University, Alfred, New York; and Cleveland Institute of Art, Cleveland, Ohio. Clark’s work can be found in international art collections, including the Kunstmuseum Düsseldorf in Germany; the Niiijima Glass Art Center in Japan; the Tittot Museum of Glass in Taipei City, Taiwan; the Art Gallery of Western Australia in Perth; and the Corning Museum of Glass in Corning, New York. He was awarded the 2009 Pennsylvania Council on the Arts fellowship and numerous fellowships from Temple University and the National Endowment for the Arts.

Jon Clark and Angus Powers, Collaborative Series, blow molded glass and cast glass, 2013. Photo by Angus Powers.

Powers received much support from Clark as a graduate student attending Tyler School of Art, where Powers received his BFA. “I remember Jon showing me a slide of him working from a primitive wood furnace when he was traveling in Egypt early in his career. Jon was a very positive mentor and has done a great deal to shape my personal creative research as well as my teaching philosophy and general attitude about life. Always know your history (ancient and recent), always update your curriculum for the benefit of your students and your teaching practice, and always make work that is true to your own personality.”

Powers and Clark took turns making objects and eventually collaborated on four finished pieces. Clark provided and utilized a plaster blow mold of a Kewpie doll, a figurine based on comic strip-like illustrations by Rose O’Neil of sweet-faced, big-eyed babies. They first appeared in *Ladies Home Journal* in 1909 and were contained in the time capsule at the 1939 New York World’s Fair. “Using this mold as a starting point, we would add bits of glass as we handed the blowpipe back and forth between us. In a way we were creating a hybrid of an ancient relic and a modern representation of the collaboration between a 1950s childhood and the skill sets of both of our histories. I admire the resulting objects, not from a formal perspective but more as a perfect object created by two generations to represent a day.”

Making Work in a Roman Furnace

At that point Powers started to experiment with nontraditional techniques and developed multiple series of sculptural work made in the Roman furnace. “I began paying attention to the setting and my immediate surroundings of nature for both formal and design inspiration, as well as a wealth of organic materials and forces to influence the work.”

Although Powers had doubts and fears throughout the entire building of the furnace and well into the firing phase, he was excited and motivated by the first few solo firings and the resulting objects. The first firing was a single crucible of clear with powdered orange glass. “I was still in the proof phase of the furnace design, so I kept the objects as simple as possible. During this initial firing, I realized that I would be able to make the largest objects that I have ever been able to make out of a wood furnace and the most articulate objects as well. As you can observe, I gained confidence with scale and finished the day with a test of creating something very small and thin.”

For the second firing, Powers followed the same philosophy but used an opaque red glass from Fenton Cullet Company in West Virginia in place of the lightly fritted glass. “Using solid opaque color can be a bit of a challenge for a glassworker, since it takes away the ability to see thicknesses in the resulting form during the blowing process. I do not recommend this to anyone who has not been working glass for very long, since it would add difficulty to an already unusual way of working.”

Powers was now able to create accurate representations of forms from historical references using the Roman furnace. "I have been to the Corning Museum of Glass dozens of times and have gone directly to see this form in its case. I had a great deal of personal satisfaction after I blew this bottle."

Surface Treatments and Modernized Forms

Powers had always been enamored with the iridized surface of ancient glass that has been buried for some time. He fired the furnace on three separate occasions to examine different applications of powdered glass that would mimic the mineral and metal deposits on the surface of the glass objects. He used powdered glass from Gaffer Glass USA, including but not limited to Silver Luster, Gold Luster, Green Luster, and Black Luster.

After posting yield from the furnace and sending images to colleagues in the glass field, Powers was invited by a curator to show four Roman forms alongside documentation of the context in which they were made. *Vase as Voice*, a group exhibition of handmade glass vases, opened in the Armstrong Gallery at the McLean County Arts Center on November 10, 2012, and ran through January 5, 2013. Glass artists from central Illinois and beyond exhibited their interpretations of the vase form. Utilizing handblowing and flameworking techniques to create functional and sculptural vessels, the forms expressed the artists' personal aesthetic or relayed a narrative. The exhibition included work by Carrie Battista, Steven Ciezki, Patrick Frost, Slate Grove, Carmen Lozar, Penelope Rakov, Amy Rueffert, and Matthew Urban as well as Powers.

"I had expected or at least hoped that viewers would look at these objects or at any of the objects created from this furnace in a different way due to the extreme context. I hope as I continue to move forward with this project that I will be able to provide documentation and background information alongside the objects fabricated outside with all-natural, sustainable materials, and that this will give a place and conceptual power to the objects in future exhibitions."

Eric Markow (left) and Thom Norris (right) with their Paragon Pearl-56. Eric and Thom spent several years developing the woven glass technique shown above. Photo by Marni Harker.

"We love the even, consistent heat of the Paragon Pearl-56" — Markow & Norris

Eric Markow and Thom Norris are noted for creating woven glass kimonos, which have been called "impossibly beautiful." The kimonos weigh an average of 125 pounds.

Eric and Thom fire their glass in nine Paragon kilns. "Now that we've done all our testing, and have actually cooked sculpture in the Pearl-56, it is our favorite kiln and we love the even, consistent heat," they said recently.

The Pearl-56 has elements in the top, sidewalls, and floor. The kiln uses advanced power ratio technology to balance the heat between the top and bottom sections in increments of 10%.

The digital Pearl-56 has lockable casters, levelers, two peepholes in the front, two vent holes in the top, mercury relays, and a ceramic fiber lid. The Pearl-56 firing chamber is 30" wide, 56" long, and 16 1/2" deep (top to bottom).

If you are not yet ready for the massive Pearl-56, then choose the exact size Paragon kiln that you need. We offer a full range of glass kilns from the small FireFly to the intermediate Fusion and CS clamshells to the Ovation ovals.

For more information on these exciting kilns, see your distributor, or call us for a free catalog.

Creating Sculptural Series

Powers was finishing his day by making a bottle form when, due to exhaustion or distraction, he lost control of the form. He took the resulting “blob-ject,” blew it into the woodpile, then sucked all of the air out of it. “I was pleasantly surprised by the organic linear object that emerged and was attracted to the surface texture mixed with the surface treatment I had been toying with.”

He began purposely creating these objects with distinct color layers combined with patterns of the logs over the next three to four firings. “There is something intriguing about an object that is created from trees, sand, and earth, and the way those elements resonate with the formal attributes of the object.” The first notion of creating a sculptural object that would relate to the whole experience of working in a Roman furnace started as a momentary impulse and ended up being some of Powers’ favorite objects made using these ancient processes.

Powers also became interested in combining his work from the Roman furnace with pieces he exhibits in contemporary galleries. Although early in the process, the artist has made a series of half planets referencing the outer crust and molten cores of moons and planetary bodies. “I have begun to use these smaller planetary objects with some new glass pieces that I am making in the Alfred glass studio.”

Making History

In addition to building and teaching through his Roman furnace project, Powers pursues glass sculpture and design. His work appears in the collections of the Museum of American Glass, Weston, West Virginia, and the Glasmuseet Ebeltoft, Denmark. Powers has participated in various group shows at the Noyes Museum of Art, Oceanville, New Jersey, and the Muskegon Museum of Art, Muskegon, Michigan, and had a solo show in the Ceramic Museum at Keramikmuseum Westerward, Hohr-Grenzhausen, Germany. The artist has performed solo, collaborative, and sustainable glass practices demonstrations at the Glass Art Society (GAS) conferences in Pittsburgh, Pennsylvania; Toledo, Ohio; and Chicago, Illinois.

Powers will continue tinkering with some new way to melt glass, whether ancient or untried. Recently his research has turned more toward engineering and working with experimental glasses. Powers has received numerous requests to share copies of the results of his Roman furnace project. His intention is to eventually self-publish this experience in the form of a hardcover photo journal that would be published and sent to the Corning Rakow Library and Scholes Library, and be available to the public upon request. **GA**

How to Use The 2015–2016 DIRECTORY of INDUSTRY SUPPLIES

Keep this Directory handy! Our 2015–2016 DIRECTORY OF INDUSTRY SUPPLIES is dedicated to making the buying and selling process between artists and retailers/suppliers mutually beneficial by providing glass artists with new sources of supplies and providing suppliers with new prospects and customers. We urge you to consider this your source for virtually everything you need to operate your business. The companies listed in the Directory are in business to serve you. Give them an opportunity to prove how good they are.

The 2015–2016 DIRECTORY OF INDUSTRY SUPPLIES consists of two sections:

COMPANY LISTINGS..... 25

These comprehensive, alphabetical listings provide address, phone number, toll-free (800) number, fax number, Web address, e-mail, contact person, products or services available, product trade names, and brief comments for each glass art supplier. Some suppliers chose not to have all the information printed. Each listing includes all of the pertinent data submitted by the supplier.

PRODUCTS AND SERVICES..... 32

The products and services are listed alphabetically by state, and as an extra convenience, the suppliers of these products and services are listed alphabetically by state. For example, if you live in California and would like to purchase pliers, simply find the category titled “Pliers” and look for California suppliers who carry them. Some categories are divided into subheadings, so you can quickly and accurately pinpoint the listing you need. Refer to the company listings section for detailed information on each supplier.

FAX NUMBER: 989-856-4040

WEB: www.evenheat-kiln.com

EMAIL: info@evenheat-kiln.com

CONTACT: Mike Kelly

PRODUCTS OR SERVICES:

We manufacture electric kilns of all sizes with interior dimensions ranging from 6 x 6 to 74 x 50 x 13 inches. We offer many enhancements to customize your kiln such as built-in or handheld units as well as the new Swing View Option for Rampmaster and Set-Pro controllers. Handheld and Swing View units can either be installed directly at the factory or supplied as a retro-fit kit for kilns currently in the field. The Rampmaster has the ability to run the most complex of firing schedules with features such as Power Tame, which

allows for a percentage control of lid elements without the use of separate infinite switches. The Set-Pro is equally valuable as a controller with On-the-Fly features to give you total control of your firing. Other options for customizing your kiln are digital and analog pyrometers, large 2 x 4-inch viewing window, vent holes, Orton VentMaster for single or multi kiln use, and the Kiln Integrated Software System that allows you to program, monitor, collect firing data, and start/stop.

BRIEF ADDITIONAL COMMENTS:

Evenheat Kiln, Inc. has over 60 years of experience in providing top-of-the-line kiln products and superior customer service to domestic and global markets.

PRODUCT TRADE NAMES:

Rampmaster®, Rampmaster® II, Set-Pro, Rapid Fire, Hot Box, Hot Shot, Jewel Box, Studio 8, Studio Pro and Dyna-Lift. Up to 10 Rampmaster II equipped kilns directly from your personal computer. We also custom-make Rampmaster II and Set-Pro Wall Mount Controllers that allow you to convert any manually operated kiln to automatic. In addition we carry a full line of kiln accessories and replacement parts such as full shelves, half shelves, posts, glass separator, haik brushes, hot gloves, and all kiln components. The most recent addition to the kiln line is the Dyna-Lift. The Dyna-Lift makes lifting the heaviest of lids a breeze, all while not putting any stress on the body. The Dyna-Lift is easy to install on your older Evenheats as well as your new one.

PRODUCTS OR SERVICES:

Glass Patterns Quarterly is the leading international glass publication. We've been providing inspiration and information since 1985 to glass hobbyists and professional artists. This has been accomplished by developing relationships with experts in glass and sharing their techniques with readers through in-depth, step-by-step tutorials. In every issue you can enjoy great content with popular artists and instructors and cutting-edge techniques using the latest industry products. New Books, Products, Industry News, and What's Hot keep you abreast of the latest happenings in glass. We feature inspiring gallery showcases, dynamic general interest articles, tips and techniques, and health and safety information. These features along with our 16-page, pullout patterns section, most of which are full-size, make *Glass Patterns Quarterly* the number one glass art publication.

PRODUCTS OR SERVICES:
Founded in 1973, Uroboros Glass has been an industry leader as a manufacturer of 130 different styles of specialty art glass. This includes our four distinct product lines of Art Glass, System 96, FX90, and URO104. The Uroboros Art Glass line has a wide selection of various textures which include Granite, Smooth Ripple, and Herringbone Ripple. These textures are very popular due to their distinctive mixes of both opal colors and transparent colors to achieve rich and unusual color combinations. Our FX90 and System 96 Product Lines are created using vibrant, saturated colors and are available as Double Rolled Smooth or in a variety of textures. All three of these Product lines are Iridized for added sparkle and depth. In addition to sheet glass, System 96 and FX90 have complimentary glass accessories including frit (5 sizes) and noodles.
BRIEF ADDITIONAL COMMENTS:
We can work directly with the artist to develop precise custom hand-rolled specialty colors or other projects. We offer classes with world-renowned glass instructors for advanced studies, beginning classes for those just getting started in glass, and host artists from all over the world in our Artist-in-Residence program. Additionally, our facility has numerous kilns available for rental. Visit our website for more product information, technical guidance, or assistance on your next project.
PRODUCT TRADE NAMES:
FX90®, System 96®, URO104.

WARDELL PRODUCTS

PO Box 480069
Fort Lauderdale, FL 33348-0069
954-607-2189
FAX NUMBER: 754-551-5462
WEB: www.wardellpublications.com
EMAIL: carole@wardellproducts.com
CONTACT: Randy Wardell, Carole Wardell
PRODUCTS OR SERVICES:
Wardell Products is a full-line publisher of books for the art glass industry with titles for Stained Glass, Fusing, Casting, Jewelry, and Glass Mosaics - a total of 43 titles in print. Most of their books are also available for immediate download in eBook format on the Internet at www.ebooksforartglass.com.
BRIEF ADDITIONAL COMMENTS:
Wardell Products now offers a line of ceramic fusing molds including the Binasphere Mold that enables users to create either a footed bowl or a footed

platter using only this one mold, the Starfire Draple Mold with the ability to add a stemmed foot and the Drop-Thur Mold system that aligns the glass-drop to a wine-glass style foot. Find out more at www.joyoffusing.com.

Mary Van Cline

Transmitting Timeless Visions

*Mary Van Cline, Healing Passages of Time,
6' (h) x 10' (w) x 1'(d), photo glass, 2008.*

by Shawn Waggoner

As a photographic sculptor, Mary Van Cline combines black-and-white images with *pâte de verre* elements in a narrative story about the passage of time and healing. In her third decade of working with these combined materials, the scale of Van Cline's work has increased substantially, infusing sculpture that reads like a theater set with even more drama.

"Photography has a memory-evoking power. Its strength is in the lifelike quality of the image. Its drama is the narration of the story. It stops time and captures the timelessness where we can reflect. I sculpt the human figure into position in the photographic landscape and create the beginning of the play."

Van Cline's inventive process often combines hot and cold glass techniques, cast elements, and photosensitized glass in one piece. She worked with Kodak in the late 1970s to develop a positive photo emulsion for coating glass. More recently, the artist joined forces with DuPont to develop a method for infusing photographic images into safety glass. This process expands the use of photography in glass for outdoor and architectural applications.

Introduced to glass in 1978 at Penland School of Crafts, Bakersville, North Carolina, Van Cline went on to earn her MFA in glass sculpture and design at Massachusetts College of Art, Boston, Massachusetts, in 1982. The following year, the artist was invited to be one of the inaugural fellows at the Creative Glass Center of America (CGCA) at WheatonArts, Millville, New Jersey, helping to develop a program that allowed glass artists access to Wheaton's glass factory.

Throughout her career, Van Cline has been an instructor at Penland, Pilchuck Glass School in Stanwood, Washington, and many universities including Kent State and the University of Ohio in Columbus. She also taught at Rhode Island School of Design, Providence, Rhode Island, and Massachusetts Institute of Technology, Cambridge, Massachusetts.

Van Cline's work can be found in many private and museum collections around the world including the Smithsonian American Art Museum and the Renwick Gallery-Smithsonian, Washington, D.C.; The Corning Museum of Glass, Corning, New York; and the 21st Century Museum of Contemporary Art in Kanazawa, Ishikawa, Japan.

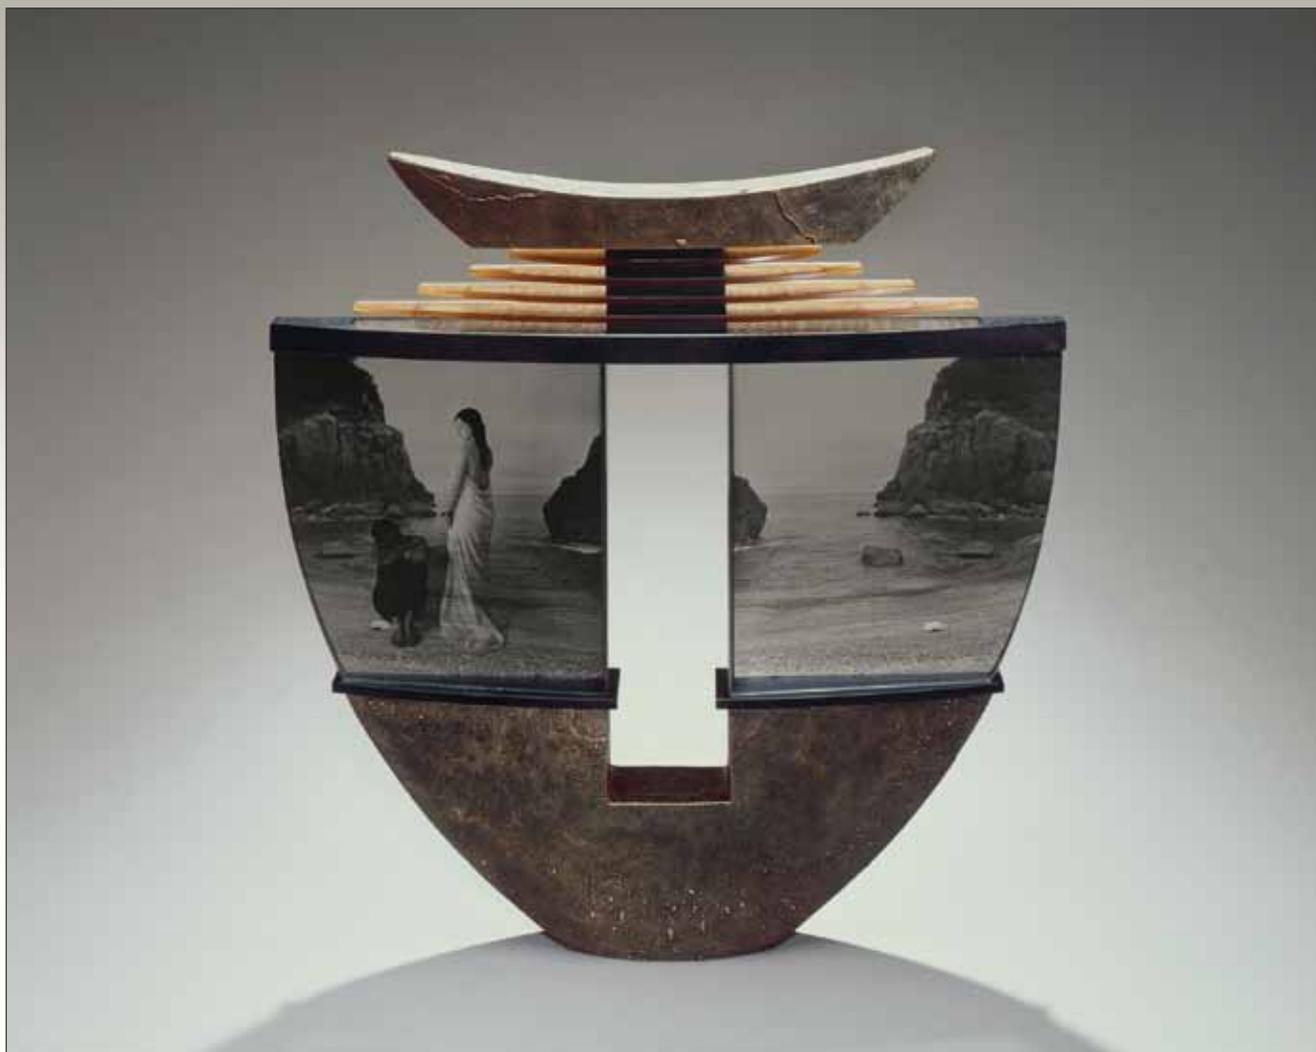

For the Seattle, Washington, artist, time and space have been constant themes in her work. Van Cline continues to see glass as a metaphorical vehicle for her images and narratives but wants the viewer to be so lost in the story that material and process are of no concern.

Early History

Born and raised in Dallas, Texas, Van Cline served for one year in 1976 as an artist in residence for the City of Dallas, a position that allowed her to sandblast images onto glass. In 1977 she was awarded a scholarship to Penland, where Fritz Dreisbach headed the glass studio at the time. There she started working with glass as a medium for artistic expression and never looked back.

In 1978, Van Cline moved to Boston to attend graduate school at Massachusetts College of Art, headed by Dan Dailey. His more sculptural approach to glass appealed to her working sensibilities. When she arrived, the hot shop had been torn down to make way for a new one, but that did not discourage her. In fact, she was elated to work in one of the best cold shops available at the time.

During that period she created several sculptures by ladling hot selenium glass into water to make frit for her abundantly textured "sugar" pâte de verre. Van Cline cut out Styrofoam shapes, made plaster molds, and filled them with broken glass to create different

Mary Van Cline, *Cycles of the Relationship of Time*, 25" (h) x 26" (w) x 6" (d), photosensitive glass, pâte de verre, bronze patina, 2000.

Mary Van Cline, *Curve of Time*, 26" (h) x 15" (w) x 6" (d), photosensitive glass, pâte de verre, bronze patina, 1997.

elements that were assembled into sculptures. These early pieces, including her favorite of the series *Japanese Foot Bridge*, took months to make. Van Cline combined photosensitive glass with pâte de verre for the first time in a piece titled *Good Morning Heartache*, made for her MFA exhibition.

In 1983 Van Cline accepted an invitation to serve as an inaugural fellow at WheatonArts' Creative Glass Center of America (CGCA) program. In addition to developing a program for glass artists and helping to build the facilities, she extended and refined her own artistic voice. The artist used neodymium glass, invented in the early 1920s by Wheaton Industry for Avon perfume bottles, in her early work *Exit to the Room of Voices*. This was purchased by The Corning Museum of Glass in 1984. Her piece *The Balance Just Beyond* features early Van Cline frameworked elements plus cast and photosensitive glass.

After traveling back and forth between Massachusetts and New Jersey, Van Cline eventually moved to New York in late 1984 as artist in residence at the New York Experimental Glass Workshop, now UrbanGlass. During the subsequent year, she lived in the Big Apple and began incorporating neon into her work as seen in *Healing Series Parts 1 and 2*. Van Cline left Massachusetts, New York, and New Jersey and moved to Washington in 1986.

The Journey

With her Hasselblad camera in hand, Van Cline travels to photograph remote and often desolate locales. Her search for geologically formidable vistas and landscapes has taken her to Crete, Japan, Baja, and the lava plateaus of eastern Washington State, places where you begin to think about mortality and time.

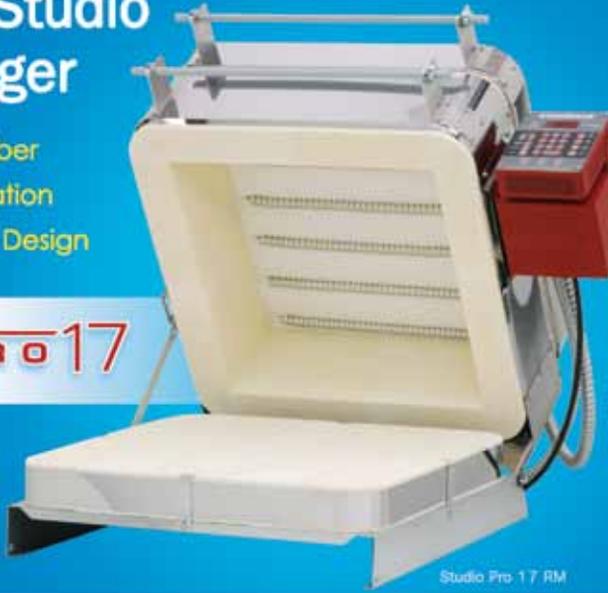

In 1986, Van Cline spent several months on the island of Crete. There she photographed a rocky grotto where Byzantine monks once meditated in seclusion. The stark, austere settings found their way into Van Cline's work and provided an ideal environment for further investigation of time and timelessness as seen in *Linear Barriers* and *The Flow of Time*. She began to incorporate symbols such as the ladder, the hourglass, the arrow, and the portal as symbols of passage.

Mary Van Cline, *Japanese Footbridge*, 12" (h) x 14" (w) x 10" (d), pâte de verre, cast, polished prism, 1982.

In 1987, the National Endowment for the Arts and the Japan/United States Friendship Commission presented Van Cline with their Cultural Exchange Award for a six-month residency in Japan. She was the youngest ever to receive the award. "It was like winning the art lottery." Over the course of the next five years, she traveled the entire archipelago of Japan's four islands, photographing as much of the country and its people as she could. Her exposure to Japanese Noh theatre and Butoh dance provides ongoing major influences on the development of her imagery as seen in *The Listening Point*, part of the collection of The Smithsonian American Art Museum.

"In Butoh dance, the emotion of angst is present through its almost motionless form. You cannot tell the dancers are moving, but they are. The landscape is moving as fast as the figure. The tiniest bending of an elbow, dropping of a shoulder, tilting of a head, lowering of an eye can create an enormous amount of emotion. I work that into my photography . . . *my theater*."

Forms and Photography

After her stay in Crete, Van Cline began creating classic vessel forms that evoke ancient eras. Multiple stacked glass ridges conjure Buddhist pagodas, while cap forms evoke the curve of a torii gate, a Shinto architectural form that provides a portal view toward a sacred place, as seen in *The Curve of Time*. The artist uses cast glass elements applied with texture and patina to resemble bronze. Copper and gold foil add color to works such as *Cycles of the Relationship of Time*.

Van Cline relies upon large-scale assemblage sculptures and installations to provide the stage for anonymous visitors that appear like apparitions shrouded in black or white cloth. In pieces such as *Communication Waiting*, her characters do not represent death but rather provide another dimension of the spiritual, of the self.

To capture figures in glass, Van Cline makes double exposures, posing the figures in her studio. Manipulating shadow and form creates a montage interaction between the figures and the landscape. She divides the image by separating two cast and polished clear glass prism elements. Those prismatic elements create internal reflections that subtly multiply the object in the image, making it appear more three-dimensional. To create extended images, Van Cline juxtaposes transparent photos that are reversed, making a panorama of a new landscape inside the glass. She describes this affect as theater in the round.

collection.

Mary Van Cline, Ivory Figure with Jade Leaves from the Ivory Figures Series, 53" (h) x 22" (w) x 8" (d), ivory and jade pâte de verre, 2007.

A Move to Three-Dimensional Subjects

For her *Ivory Figures Series*, Van Cline pulled a female figure from her photographs and created her three-dimensionally in pâte de verre. This series began when Van Cline moved her studio next door to a bronze factory, where she learned to cast and make molds of life-size figures. The process is the same, but glass is introduced to the mold instead of bronze. To create the drapery, Van Cline dipped canvas in plaster, wrapped it around a figure, lifted it off, and made rubber molds that were painted with wax, steamed out, and filled with glass frit.

Van Cline introduces a variety of texture to her glass sculptures by firing at different temperatures. The upper body and partial head are fired solid to a high temperature in a plaster mold. The drapery is made from the same glass, but fired to a lower temperature in a "sugar casting." Trial and error helped Van Cline discover the strength of different textures achieved through heat and compression as well as gravity melting.

Staged Stories

In 2009, Van Cline was invited as the sole artist working with glass to participate in *Staged Stories: Renwick Craft Invitational 2009*, curated by Kate Bonasinga, at the Smithsonian American Art Museum. Along with three other artists, Van Cline was selected because her work departs in significant ways from long-standing craft traditions by discarding the baseline rationale of crafts—their functionality—to create narrative artworks that confound old categories in the world of contemporary craft. As the exhibition title suggests, theatrical elements including props, costumes, and narration, are what bound together these varied pieces. Van Cline's work was featured on the cover of the show catalog.

In *The Listening Point/Winter Ice Branches* (1993–2008), Van Cline produced a room-size installation of architectural proportions. The 6-foot-tall transparent glass photograph reflects into a large black glass pool. The Japanese Shinto frames the scene, creating a portal to a timeless drama. The 8-foot-long pâte de verre ivory ice branches were nested and stacked upon one another in their own reflecting pool. "In these installations, I'm hoping to create my own personal sense of theater and stage design. My imagery is contemplative, and the sense of story is intended to invite the viewer in as a participant."

Van Cline created a second piece for *Staged Stories*, this one using technology developed with DuPont for infusing safety glass with photographic images. The artist began working with the company following a large commission in Tel Aviv, Israel. Van Cline had been searching for a way to install black-and-white photographic images outside in the intense Middle Eastern heat. She began by taking her large film to a DuPont laminating facility. "We initially used a large piece of Kodak film that had been heated in an enclave to 400 degrees Fahrenheit and pressed between DuPont's inner layer of plastic indoor safety glass. Everyone was shocked that the film didn't melt!"

Van Cline was approached by DuPont's team to forego the film and infuse an image on DuPont's plastic inner layers, which would then be heated up and stacked into glass that could survive outside. After almost a year of experimentation, Van Cline and DuPont were successful. The results can be seen in Van Cline's sculpture, *The Healing Passages of Time*, which incorporates two adjacent 5-foot by 6-foot transparent glass photographs. In the Renwick Gallery, an alcove was built just big enough for the piece. A theatrical lighting designer was hired to project light through the big panels to create a projected painterly image on the back of the alcove, like a giant slide show. Now DuPont has licensed the process for architectural application.

Where Time Does Not Exist

The artist has recently completed several large commissions, including a 30-foot-high cast glass piece for a three-story staircase on the largest private yacht built in the United States. For the last year, she has been working on a site-specific sculpture for the home of well-known Seattle art patrons, designed by famed Northwest architects, Jim Olsen and Tom Kundig. To complete the requirements of the commission, it was necessary for Van Cline to invent new tools and processes, something she has done since her earliest days in glass.

For the last seven years, Van Cline has been working on commissions that inspire interaction beyond the studio with other industries. "This keeps my artwork fresh and challenges the boundaries of my concepts." The digital age of imagery has forever changed the world of photography. The artist approaches new challenges by keeping one foot in the past and one foot through an open door to the future. As she works on her original series utilizing Kodak glass plates, Van Cline also embraces digital techniques and applies them to her sculptures with each new series.

Adorned with symbolic ladders, sundials, and hourglasses, Van Cline's work serves as a stage for characters depicted in her photography. The work calls for a participatory response from viewers through their own discoveries or placement in surreal landscapes. Van Cline's images call on us to abandon preconceived notions and live in a place where time does not exist.

The Evolution of the Keyword

by Mark Veit

We have all heard how important keywords are to a successful website—that the more keywords you have on each page, the higher your search engine ranking will be. Like most things in life, however, search engine optimization (SEO) is evolving, and what worked years ago no longer does. Don't get me wrong. Keywords are still very important. They just need to be placed properly throughout your website.

The Advent of Google Panda

In the early days of SEO, careers and big businesses were made by people who could increase a website's presence in the search engines. This was done by using keywords and variations of keywords as much as possible, everywhere they could. It became more important for businesses to stuff their websites with keywords than it was to provide valuable content.

Businesses padded their websites with keywords for years until 2011, when Google released an algorithm called Panda, which was released to penalize sites that were swamped in advertising but lacked quality content. Panda also rewarded sites that did provide quality content by moving them up in the rankings. Since Panda, Google has released other updates, and they will continue to do so for the rest of time. Like anything, people will try to circumvent the system and take shortcuts with SEO, at which point Google will release another update to combat those practices.

I believe Google's latest approach is a good thing, because it makes for a better user experience and ranks the highest-quality sites at the top of the search engine. It also rewards the businesses that take the time to provide quality content to the users searching for their products. If you are still of the mind-set that you need to stuff your keywords into every sentence on your site, please reconsider. Times are changing, and quality content that is supported by proper keyword placement is the way to the top.

The following would be an example of common website wording prior to Google Panda that would have been rewarded if you were selling fused glass: *Our fused glass is the most beautiful fused glass in the fused glass world. We handcraft our fused glass from the best fused glass products around. We hope you like our fused glass.*

If you searched for fused glass in the early 2000s, this company might be near the top of the search list. Unfortunately, the text is hard to read and even harder to take seriously. This sort of thing is now penalized by search engines for overusing keywords.

These days, it is important to use your keyword in your titles and keep them short, if possible. The industry standard is 55 characters or less for the title. You still want to use keywords throughout your website. Just be sure you do so only when needed. Don't throw one in just to have it in. The Internet is trending to be more of an experience, and you should be providing exactly the experience that your customers are searching for and expecting.

Helping Customers Find What They Need

Many companies use their home page to link to everything they offer, but it's important to link to the page that most closely relates to what the customer is looking for. If you sell glass sculptures, glass plates, and glass vases, for example, it is important to advertise and guide people to each individual category instead of simply dumping everything on the home page and leaving customers to search for themselves. If customers are searching for sculptures and get linked to your home page that has a picture of a glass plate, it could throw them off. By streamlining your links, people searching for a sculpture would be brought to your sculpture page, thus validating your website in their eyes and raising their confidence that they are in the right place.

Simply put, don't try to shortcut the system. You can do more harm than good. Embrace the changes happening with SEO and believe that by providing valuable content and products, supported by proper keyword placement, your website will be rewarded. The more value you add, the more your customers will be rewarded as well.

Run your website more like a brick-and-mortar store in the sense of visual appeal. Make sure your home page smoothly leads into other categories on your site. With all of the new technology and apps being added to websites, it is getting easier to decipher a good, functional website from one that has been neglected. Sales will also reflect this. If customers are not comfortable on a website, chances are they will continue to search for one where they are. Even if you have a more valuable product, if the customer isn't comfortable, there is a good chance you will lose that sale to a competitor.

Technology and the Internet are moving faster today than ever before, so it is important to do some research every so often to see what the current trends are and adapt to them. The trend now is to provide the customer a clean and valuable experience when visiting your welcoming, easy-to-use website. Keeping up with these trends will put you ahead of those who don't, and you will be able to adjust as things change. Sometimes a sale is dependent on being just one rung higher than your competition on the search engine ladder.

Glass Jewelry by Tanya Veit

Mark Veit currently owns and operates www.aeeglass.com along with partners Tanya and John Veit. They create enamel waterslide decals for glass artists and sell them on their website along with unique silver settings for glass. They also wholesale their fused glass jewelry to galleries and boutiques.

Constantly attending workshops, seminars, and classes with master artisans helps Veit and his partners evolve their work and makes it possible for them to offer glass and jewelry artists a unique medium to maximize their sales. Visit www.aeeglass.com or e-mail info@aeeglass.com for more information.

Traditional Glass Painting Made Easy

Full-Color Illustration Using Traditional Glass Stainer Colors

Design, Fabrication, and Text by Peter McGrain

Understanding how to create imagery on glass using traditional glass painting methods can lead to unlimited levels of expression in your work. In the preceding articles in this series, we have discussed the fundamental use of the type of glass paints known as *traditional glass stainer colors*. These are the most common type of powdered glass paints, which are applied and fired onto the glass surface. We've examined how to prepare these paints for use by regulating the wetness and hardness of the mix and how to apply them to the glass surface using the two processes of tracing and matting. In this article I'd like to present a common step-by-step sequential approach to accomplishing a finished picture on clear glass using these techniques.

For this example we'll be creating a portrait of a young woman's face. The process begins by creating an initial drawing of an intended image on paper to use as a reference for the structure of your subject. Drawing well is certainly not a prerequisite for this process by any means, and it is perfectly legitimate to use any existing imagery you may find as a reference for developing your design. You can use your own photographs or look around in books or online for relevant material.

Rendering faces is challenging, but the results are always worth the effort. Though it has taken me years to become comfortable with my own results, I now really enjoy doing portraits unless, of course, it is supposed to actually be recognizable as a specific person. That's always a difficult assignment!

Faces involve all sorts of challenging dimensional forms that demand careful evaluation when rendering them with shadows and highlights. I also like the way that any face, no matter how refined or primitive it may appear, tends to project expression and emotion back at the viewer, evoking a sense of vitality from deep within the image. I don't care if I'm carving a sloppy cartoon face into a pumpkin or tediously rendering a photo-realistic portrait of some character for an elaborate stained glass window. The resulting expression, be it deadpan or exuberant, always engages me.

*Sketch or trace
the initial design
onto paper.*

For our portrait sample, I've prepared the design as a simple freehand pencil sketch on paper. If you aren't feeling creative, you could also just trace an existing image or photo onto paper using your light table. This design stage is the most creative part of the process, because you are making choices about what the composition will be. Everything that comes next when translating it into a glass painting is basically just clever follow-through.

Take the time to make sure you are happy with your design. Normally I spend far more time developing my design on paper than I actually do painting the image. Countless “redraws” and refinements are made, and I always go through more erasers than I do pencils! It is critical that your composition is as secure as you want it to look before painting begins, because once you get started there is little opportunity for revision. Basically what you want to achieve on paper is the fundamental outline of the shapes of your subject(s) within the composition along with any specific line work within the design that you need to capture, such as details around eyes or lips. Shading is not as critical at this point, since this it usually better developed during the painting process.

Trace the image onto clear glass.

2

When ready, place the design beneath your glass workpiece on the light table so you can follow it from above as you apply your trace lines to the glass. By tracing first, you establish the “drawing” of your image on the glass, thus giving you a design to follow when you move forward with the subsequent color and shading steps.

It is important to remember not to “overtrace” your image. That is, don’t be so aggressive with the line work that the image appears too heavy. You don’t need to tell the whole story with the lines. Shading can also express the edges of forms. For example, note how the shape of the eyes in this design are only partially outlined with trace lines. Matts will be used later to complete the more delicate appearance of the eye shapes.

Another important factor is to use wider trace lines in your picture when they fall between adjacent color fields—for example, where the edge of her hair passes before the background. This will make it easier to physically apply the color fields of the picture in the next step. Remember, if your trace lines go down sloppy, you can easily trim them into acceptable shape with a sharp wooden stick before firing the paint. If you look at my tracing design, you will see that I also tend to utilize visible scratch lines as an aesthetic device in my line work. This is primarily because I don’t have a steady hand, and they help draw attention away from my inconsistent line shapes. They also lend sort of a handcrafted woodcut look to the work, which is a lucky perk.

Insert the color fields.

3

Once the tracing is fired, it is time to add the color fields to the picture. Basically this is like doing a coloring book picture where you simply fill up each color zone of the picture, right over the fired trace lines, with a uniform matt of

solid color. You are not trying to achieve any kind of shading here. That will be accomplished farther down the line. All you want to do now is to establish the presence of solid color.

By the time you finish the picture, the color you are placing now will be exposed as the apparent color of the brightest highlight within the color field. Shading matts will be used later to push these color fields into darker values and deeper dimensionality to create texture and form.

It can be tricky to fill one area with color, then try to blend color into an adjacent area. Often the blending action will cause the brush to drift across and ruin the previously applied color area. This is where the wider trace lines between color zones are helpful, since they give you a slight buffer to accommodate the blending motion. I also use a little more gum arabic than usual when filling in color matts to give them more resistance to accidental scratching.

With complex designs, it can sometimes be difficult to fill in all of the color fields with a single firing. It may take as many as two or three separate firings to get all the color in place. In my portrait I used Umber Brown for the flesh, Apple Green for the jacket, Blue Violet Purple for the shirt, Yellow Brown for the hair, Teal Blue for the beret, and Persian Red for the background. These colors all have somewhat of a pastel appearance that renders a gentle, traditional look to the finished work. If you want bright, striking color, you will discover that other paints such as silver stains and transparent enamels may be a better choice. I’ll be discussing those paint types in future articles.

After the color fields are fired, you may notice a subtle, but somewhat annoying, reflective characteristic to the painted surface. It seems to appear that colors have been fired over the trace lines and can look a little messy. Don’t worry about this. By the time the following layers of shading matts are fired over the color fields, this issue will not be noticeable. That is why it is so important that the color fields be added first so that the shading matts can overpower their reflective qualities. Also, don’t worry if there are some inconsistencies or subtle blotches or streaks in your color fields, since these defects will also most likely be unnoticeable by the time all the subsequent shading has been applied. Once the color fields are fired in place, you can then begin shading the image.

Apply the shadow matt.

4

I always begin shading my image with what I refer to as a *shadow matt*. This is basically a medium-dark matt, usually Bistre Brown or Tracing Black, applied in a uniform streak-free matt over the entire piece.

After I take into account where the light source affecting my subject is, I begin stippling and scrubbing away everything except where I think the *shadows* should remain on the image. I don’t try to accomplish highlights yet. That comes next. This is just a way to establish a perceived depth of form via shadows. In my portrait you can see the shadows have been carefully placed—that is, allowed to remain—under the chin, around the throat, and throughout the rest of the image to establish texture and form. This matt also helps create controlled darker values of the color field areas throughout the image.

Artists at Work: Ted Sawyer

Dive into the process with artist Ted Sawyer as he creates two of his signature works with powder on sheet glass, detailing his preparation, composition, firing considerations and more. One of more than 70 in-depth video lessons Bullseye Glass offers to inspire kiln-glass makers everywhere.

Subscribe and watch at bullseyeglass.com/bkeo

My other visual goal during this phase is to downplay how noticeable the mechanical tracing lines are by methodically allowing the adjacent shading to absorb them into the planned darkness. By aggressively shading on one side of the line and keeping the color bright on the other, a visual contrast is set up between the elements of the design, greatly assisting with the legibility and depth of the picture. Eventually, only one edge of the tracing line is visible, allowing the line work to disappear into shadow, thus resulting in the dramatic appearance that the seamless subject is “emerging” out of the darkness of the scene. This is the most sensational way to render imagery on glass where the absolute brightness of the transmitted light passing through the work is equally balanced and engaged by the utter darkness of the traced lines and deep shadows. If those tracing lines are too visible, the picture can remain looking too cartoonlike and not as sophisticated as it ought to.

5

Add the highlight matt.

After the initial shadow matt has been manipulated and fired, I apply a lighter matt of uniform, streak-free tonality over the entire piece. Usually I use Bistre Brown, but Tracing Black or even Black Green can work. I avoid lighter colored paints such as Umber Brown for this cycle, since they can also sometimes reflect an annoying colored surface reflection that detracts from the imagery. I refer to this matt as the *highlight matt*, because I will be focusing on using it to showcase the highlighted areas of the picture.

It's usually pretty easy to figure out where the highlights are supposed to go, because you have already evaluated the lighting and set up their position apart from the shadows of the previous cycle. Delicate highlights are seen on the cheeks and throat areas of the girl's portrait. It looks best when you can distinctly see a few degrees of the shading color over the base color field. Adding this highlight matt also helps to double up the darkness of the areas where

shadows were allowed to remain the first time around, adding to the depth of the darkness.

Remember, it is impossible to take too much paint off during the stippling and scrubbing stages, because you can always add more in another firing, if necessary. It is very easy, however, to leave too much paint on. Once it is fired into the glass you are stuck with it, so don't be afraid to take off more than you might think you need to at first. You can always recover. It's a delicate process that requires practice. The object is to allow light to pass through the finished work and define the appearance of form by its relationship to the light and dark areas. If the transmitting light is blocked by too much paint, the image will never glow and will appear dark and flat.

Complete the image by applying an incidental matt.

The final stage of this painting sequence is a step I refer to as the *incidental matt* cycle. This is basically a final opportunity to fully accomplish the picture. Normally this means looking at the picture and deciding where any additional darkness or other content is still required.

Small, incidental areas within the design can now be darkened or textured a little further. Usually I do this not by putting another matt over the *entire* piece again, but rather by simply hand brushing isolated matts only into the specific areas that still require shading. I like to use soft quill flat applicator brushes for that—brushing paint where needed, sometimes blending—then carefully stippling and scrubbing. Other times I like to use confident flourishes of the brush and leave them just the way they are as they come off the brush without blending. This can lend an appearance of gestural immediacy to the piece. I also use this cycle to add any other finishing touches such as a light splattering of paint or spritzing to add an overall “antique” look to the work.

The incidental matt is also a final opportunity to touch up any spots where tracing lines or unintended scratches may still appear as flaws in the picture. In our example, if you compare Image 5 to Image 6 you can really see how this final painting phase is so critical in terms of galvanizing the dimensional darkness within the piece. It really can add a startling degree of form and painterly presence to the finished work.

Often painters have a tendency to abandon their images before this degree of darkness is achieved. As a result, the picture may not look as dimensional as it could. Certainly such aggressive contrast is not always appropriate, but it surely is nice to be able to achieve it when you want to.

The portrait featured here was finished in five firings—the tracing cycle, color fields, shadow matt, highlight matt, and incidental matt. With experience you may learn to accomplish as much in fewer firings or possibly select to use more. In my best work, I usually end up doing as many as six to eight firings to get what I want. You have to be careful, though, because too many firings can cause the paint from previous firings to begin to fade, and you end up overpainting and losing the deliberate look of your work.

With practice, good observation, and lots of trial and error you ought to be able to eventually get the painted look you want in the most efficient approach possible. Once you achieve confidence in your painting skills, the possibilities that come from using this approach are endless.

Peter McGrain is an artist, lecturer, and workshop leader who has been working with glass for over 35 years. He has made it his professional mission to introduce as many people as possible to the joys of glass painting. More information about his full line of instructional glass painting videos and supplies as well as numerous photographs of both his and his students' work can be found at www.petermcgrain.com and www.facebook.com/PeterMcGrainGlassPainting. Readers' Forum

Dear Shawn,

I received my copies of the July/August 2015 issue, and I have to say that the magazine is much more gorgeous and impressive in person than the online photos or even the proofs of my article, which I loved from before. The article is a large spread, a big honor, and an incredible pleasure for me.

I just finished a week at Corning. They had about 50 copies out on the tables when everyone arrived for orientation. It was very nice—such a great cover and article, which the people enjoyed, especially my students.

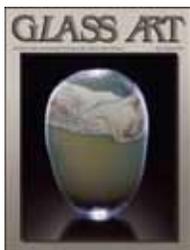

Thanks to all of you for helping to make this happen! Thank you seems like such a superficial thing to say, however, for so much that you and all of your team at *Glass Art* have done for me and my work. I will start there and hopefully be able to spread the word and get more notice and coverage for *Glass Art* also here in Europe.

Wishing you all the best and a great summer, and looking forward to the next opportunity to work with you.

My warmest regards,
Amy West

What's New

Skutt introduces the new **Micro Scarab** for the flameworking artist who needs a compact desktop model that can run on household voltage. Just take it out of the box and plug it into any standard 120-volt outlet in your home or business. The interior chamber is an ample 12" wide, 7-1/2" tall, and 9-1/4" deep. Like all of the Scarab models, the kiln comes standard with the GlassMaster33 controller, which was designed by flameworking artist Marcel Braun to be simple to use yet completely customizable.

Ed Hoy's International introduces the new **Buddha Faces Mold** from **Colour de Verre**.

Serene and contemplative, these faces seem to radiate calm. The molds are easy to use and make two faces at one time. The finished pieces are 3-1/2" to 4" tall and can be made to almost glow by fusing a piece of dichroic sheet glass to the back surface. For more information, visit the company's website.

Creative Paradise Inc. has discovered that it's possible to add frit to the bottom of textured slump mold GM124 and use a unique firing schedule to slump/texture/fuse double-thick clear onto the frit and the texture in the bottom of the mold. The company is adding a GM167 Snowman Platter and GM168 Harvest Platter to its collection to provide artists with more design options. Future additions will include a 13" round Harvest Platter and a 7" x 7" tile to match the GM168 design for a lovely set of harvest dishes. 316-794-8621 cpi@creativeparadise.biz. creativeparadise.biz

D&L Art Glass Supply is proud to announce a **new updated website**. Building on a highly detailed, product-driven website, the company has added even more ways to find products and product information. Navigate the 17,000 products using the existing catalog organization or find products by areas of interest, including stained glass, kiln forming, torchwork, and more. You can also refine your search by mold dimensions, bevel dimensions, and other criteria. This new site is also optimized for your tablet and features new larger product images. 800-525-0940 303-449-8737

Fused Quilts

Quilts tell our stories, reflect the nature of our communities, and pass our family histories on to future generations. The art of quilting has a long tradition in nearly every culture.

Northwest glass artist Susan Murphy brings together a passion for glass fusing and a love of whimsical design in her new series of fused glass quilts. The colors, patterns, and intricate nature of quilt designs allow for unlimited creative possibilities and provide the perfect vehicle for our stories to be told in glass. *Original design by Kaffe Fassett*

At Northwest Art Glass, we can help you tell your story and create your own traditions.

“For Glass the World Over”

New Kiln Glass

Wissmach 90™ PRISMA GLASS

90-18 Crystal/Black

90-19 Red/Crvstal

Wissmach is known for its great color mixes. Our new line of *PRISMA* glass is made for kiln forming. We make them both in Wissmach 90™ and Wissmach 96™.

Please visit www.wissmachglass.com for updates since we will continue to add more Wissmach Prisma™ and other kiln-glass colors.

Wissmach 96™ PRISMA GLASS

96-21 Peacock Feather/White

96-22 Peacock Feather/Crystal

96-23 Cornflower Blue/White

96-24 Cornflower Blue/Crystal

96-25 Crystal/Black

96-26 White/Crystal

96-27 Reactive Blue /Crystal

Each Prisma combination can come in a variety of color density as you can see iin those 3 colors. 96-28 is White with streaks of Midnight Blue, 96-29 is Midnight Blue with streaks of White and 96-30 is Midnight Blue with streaks of Crystal. The first part of the color name is the more dominant color of the Prisma Glass™.

96-28 White/Midnight Blue

Art Work by Petra Kaiser

96-29 Midnight Blue/White
